

Statistics for Computing MA4413

Midterm Examination 1

Type A / Type B

- Do not turn over the page until instructed to do so.
- Rough work pages are provided within.
- Useful formulae and Binomial tables are provided at the back.
- **Enter your answers (using an “X”) in the table on the last page.**
- There are 15 questions in total. Each question answered $\left\{ \begin{array}{l} \text{correctly} = 1\%. \\ \text{incorrectly} = -\frac{1}{3}\%. \end{array} \right.$
- For each question, only *one* answer is correct.
- Scientific calculators approved by the University of Limerick can be used.

Questions 1 - 5

--

Useful Formulae: Page 1

Histogram:

- class width = $\frac{\max(x) - \min(x)}{\text{number of classes}}$

Numerical Summaries:

- $\bar{x} = \frac{\sum x_i}{n}$
- $s^2 = \frac{\sum x_i^2 - n \bar{x}^2}{n - 1}$
- Position of Q_k : $\frac{n + 1}{4} \times k$
- $IQR = Q_3 - Q_1$
- $LF = Q_1 - 1.5 \times IQR$
- $UF = Q_3 + 1.5 \times IQR$

Probability:

- $\Pr(A^c) = 1 - \Pr(A)$
- $\Pr(A \cup B) = \Pr(A) + \Pr(B) - \Pr(A \cap B)$
- $\Pr(E_1 \cup E_2 \cup \dots \cup E_k) = \Pr(E_1) + \Pr(E_2) + \dots + \Pr(E_k)$ (if mutually exclusive)
- $\Pr(A \cap B) = \Pr(A) \Pr(B | A) = \Pr(B) \Pr(A | B)$
- $\Pr(E_1 \cap E_2 \cap \dots \cap E_k) = \Pr(E_1) \Pr(E_2) \dots \Pr(E_k)$ (if independent)
- $\Pr(A | B) = \frac{\Pr(A \cap B)}{\Pr(B)} = \frac{\Pr(A) \Pr(B | A)}{\Pr(B)}$
- If E_1, \dots, E_k are mutually exclusive & exhaustive
 $\Rightarrow \Pr(B) = \Pr(B \cap E_1) + \Pr(B \cap E_2) + \dots + \Pr(B \cap E_k)$
 $= \Pr(E_1) \Pr(B | E_1) + \Pr(E_2) \Pr(B | E_2) + \dots + \Pr(E_k) \Pr(B | E_k)$

Useful Formulae: Page 2

Counting Techniques:

- $n! = n \times (n-1) \times (n-2) \times \cdots \times 3 \times 2 \times 1$
- $\binom{n}{k} = \frac{n!}{k!(n-k)!}$

Random Variables:

- $E(X) = \sum x_i p(x_i)$
- $E(X^2) = \sum x_i^2 p(x_i)$
- $Var(X) = E(X^2) - [E(X)]^2$
- $Sd(X) = \sqrt{Var(X)}$

Binomial Distribution:

- $X \sim \text{Binomial}(n, p)$
- $\Pr(X = x) = \binom{n}{x} p^x (1-p)^{n-x}$
 - $x \in \{0, 1, 2, \dots, n\}$
 - $E(X) = n p$
 - $Var(X) = n p (1-p)$

Table 1 Cumulative Binomial Probabilities

p = probability of success in a single trial; n = number of trials. The table gives the probability of obtaining r or more successes in n independent trials. That is

$$\sum_{x=r}^n \binom{n}{x} p^x (1-p)^{n-x}$$

When there is no entry for a particular pair of values of r and p , this indicates that the appropriate probability is less than 0.000 05. Similarly, except for the case $r = 0$, when the entry is exact, a tabulated value of 1.0000 represents a probability greater than 0.999 95.

$p =$		0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09
$n = 2$	$r = 0$	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000
